

## Brainstorming & Idea Prioritization Template

|                      |                                                        |
|----------------------|--------------------------------------------------------|
| <b>Date</b>          | 15 July 2026                                           |
| <b>Team ID</b>       | XXXXXX                                                 |
| <b>Project Name</b>  | <b>Emotion Detection &amp; Learning Support Engine</b> |
| <b>Maximum Marks</b> | 3 Marks                                                |

### Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

| S.No | Team Member               | Idea / Suggestion                                                                                     | Category             | Group No. |
|------|---------------------------|-------------------------------------------------------------------------------------------------------|----------------------|-----------|
| 1    | P.Nisanth Manikanta       | AI-based Emotion Detection using BERT and BiLSTM                                                      | Sentiment Extraction |           |
| 2    | P.Nisanth Manikanta       | Build a sequential deep learning classifier (BiLSTM) for immediate, lightweight sentiment scores.     | ML Modeling          |           |
| 3    | <b>Abhishek Kojja</b>     | Implement a pre-trained Transformer model (BERT) to run deep contextual secondary sentiment analysis. | ML Modeling          |           |
| 4    | <b>Kaviti Sri Anirudh</b> | Connect to the Gemini API to dynamically generate personalized study tips and coping strategies.      | LLM Integration      |           |

|   |                           |                                                                                    |                |  |
|---|---------------------------|------------------------------------------------------------------------------------|----------------|--|
| 5 | <b>Kaviti Sri Anirudh</b> | Develop an analytical dashboard showing emotional distributions, trends, and logs. | Analytics & UI |  |
|---|---------------------------|------------------------------------------------------------------------------------|----------------|--|

## Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

| Group No. | Final Idea                                                                                                                   | Feasibility (High/Medium/Low) | Importance (High/Medium/Low) | Priority | Selected (Yes/No) |
|-----------|------------------------------------------------------------------------------------------------------------------------------|-------------------------------|------------------------------|----------|-------------------|
| 1         | <b>Multi-Model Emotion Detection Core:</b> Real-time sentiment evaluation using custom PyTorch-based BiLSTM and BERT models. | High                          | High                         | High     | Yes               |
| 2         | <b>Generative Learning Support Engine:</b> Instant study strategies queried through the Gemini API                           | High                          | High                         | High     | Yes               |

|   |                                                                                                                                                |      |        |        |     |
|---|------------------------------------------------------------------------------------------------------------------------------------------------|------|--------|--------|-----|
|   | based on<br>user context.                                                                                                                      |      |        |        |     |
| 3 | <b>Interactive<br/>Analytics<br/>Dashboard:</b><br>Visual<br>analytics<br>monitoring<br>emotion<br>distributions<br>across fields<br>of study. | High | Medium | Medium | Yes |
